FOR IMMEDIATE RELEASE

Pesticide Safety Certifications Extended

RIDGETOWN, ON (April 9, 2020)

As a preventative measure to minimize the spread of COVID-19, the Ontario Pesticide Education Program cancelled all classroom Grower Pesticide Safety Courses and Pesticide Vendor Certification Courses from March 16, 2020. Online courses continue, but pesticide safety certification will expire for over 1 400 of Ontario growers and vendors this spring.

The Ontario Ministry of the Environment, Conservation and Parks has announced today that growers and vendors whose certification expires on or after January 1, 2020, will be extended until December 31, 2020.

Extending these certification dates will allow Ontario's growers to continue to purchase & use the products they need for the 2020 growing season, and allows vendors to continue selling pesticides.

The Ontario Pesticide Education Program has offered courses since 1987. The courses focus on product information, health and environmental risk management, pesticide application and pesticide safety practices. Currently over 22 000 growers, 1 300 vendors and nearly 300 On-Farm Instructors are certified through the program. It is supported by growers, OMAFRA, pesticide manufacturers and retailers.
